

# Project Number: 13

# Contact Directory Management System

Presented by: **Ankit Kumar**  
ERP-ID: **RU-25-10211**

GUIDED BY: SANTANU SASMAL

# Project Roadmap

## *5 Steps*

## Introduction

A quick overview of the Contact Directory Management System and its objectives.

## Frontend Design

Exploring the user interface, visual design, and user experience.

## Live Demo

Live walkthrough of the system's core functionalities and features.

## Backend

Understanding the Java, OOP concepts, and Spring Boot implementation.

## Future Scope

Potential enhancements and upcoming features for the system.

*Let's Start with*  
**Introduction**

# Introduction

The Contact Directory Management System, a modern solution for organizing, searching, and maintaining personal and professional contacts. Built on Object-Oriented Programming principles for a structured, scalable approach.

## VIEW CONTACTS

Browse and display all stored contacts

## ADD CONTACTS

Input new contact details

## SEARCH CONTACTS

Quick lookup by name or category

## DELETE CONTACTS

Remove outdated entries

# Introduction

The Contact Directory Management System is a modern solution for organizing, searching, and maintaining personal and professional contacts. Built on Object-Oriented Programming principles for a structured, scalable approach.

## VIEW CONTACTS

Browse and display all stored contacts

## ADD CONTACTS

Input new contact details

## SEARCH CONTACTS

Quick lookup by name or category

## DELETE CONTACTS

Remove outdated entries

## Project Objectives

→ Easy Contact Management

→ Quick Functionalities:

Add,  
Search, **Contacts**  
OR Delete

→ Efficient Data Organization

→ Fast Access to Information

→ User-Friendly Interface: **Frontend Design**

*Glimpse of*  
**Frontend Design**

# Frontend Design

HTML5

CSS3

## Dark Theme

Modern dark interface with glassmorphism effects for a premium visual experience.

## Responsive Layout

Fluid design that adapts seamlessly across devices and screen sizes.

## Contact Cards

Organized card-based display with category management for easy navigation.

## Smooth Navigation

Intuitive user interactions with clean transitions and organized information display.

**What do you think what is more important: Frontend Design or how the application works?**

**"Obviously, the most important part is how the application works."**

**In case if you think it's the "Frontend Design" let me help:**

# In case if you think it's the "Frontend Design" let me help:

Think of :  
Frontend as "Sakal"  
Backend as "Akal"

## Sakal

Try sending your photo instead of your skills in your resume.

### Resume

VS

## Akal

Company will reply with a rejection letter and....

### Rejected

Try again  
after a  
facewash!

### This:

# Live Demo

*Contact Directory Management System*

# Live Demo

A streamlined four-step workflow enables users to manage their entire contact directory with speed and simplicity.

**View Contacts**

**Add Contact**

**Search Contact**

**Delete Contact**

Each operation is designed for minimal clicks and maximum efficiency 4 keeping the user experience fast, simple, and intuitive.

# Backend Architecture

*The Code Behind the Management System*

# How I Connected Frontend with Backend

## Spring Boot

Spring Boot is a Java framework that simplifies the development of web applications and APIs by providing built-in configurations, embedded servers, and easy integration between frontend and backend components.

# Browsers

Browsers are limited to **HTML**, **CSS**, and **JavaScript**. They understand these three languages directly.

## HTML

Structures content the browser renders.

# Browsers

Browsers are limited to **HTML**, **CSS**, and **JavaScript**. They understand these three languages directly.

## CSS

Styles and visually shapes the HTML elements.

# Browsers

Browsers are limited to **HTML**, **CSS**, and **JavaScript**. They understand these three languages directly.

## JavaScript

Adds behavior and interactivity to the page.

# Browsers

Browsers are limited to **HTML**, **CSS**, and **JavaScript**. They understand these three languages directly.

# Browsers

Browsers are limited to **HTML**, **CSS**, and **JavaScript**. They understand these three languages directly.

# Backend Architecture

*The code Behind The Management system*

# Backend Architecture

JAVA

SPRING BOOT

OOP

## OOP Concepts Implemented

### Encapsulation

Data bundled within objects

### Abstraction

Complexity hidden behind interfaces

### Inheritance

Reusable class hierarchies

### Polymorphism

Flexible method behavior

# Future Scope

The system is designed with extensibility in mind. The following enhancements are planned to evolve the platform into a full-featured, production-ready solution.

## Database Integration

Persist data using MySQL for reliable, scalable storage.

## Authentication & Cloud Synchronization

User authentication, authorization, and cloud-based synchronization.

## Mobile App & REST API Integration

Dedicated mobile application with REST API integration for cross-platform access.

## AI Smart Search

AI-powered intelligent search with contact backup and recovery features.

# Thank You

This project reflects a focused effort to combine modern UI design with sound software engineering principles.
